## Carezapp CONNECT

Create **personalised connections for each supported person or resident**. Providing centralised management of various teams and groups of people, including care and support teams, family, friends, neighbours and/or volunteer groups. Empower those people through **simple, secure and auditable** communication and collaboration tools.

Establish personal connections through Teams and Groups.

➢ **Teams** are members of your organisation, for example; Day Support and Overnight Support. Teams are set up by an administrator and managed by one or more team coordinators.

➢ **Groups** are people external to your organisation, for example; family, friends and volunteers. Invited to join a group by an administrator or team coordinator.

Enables instant communications within a personalised support network, features include:

- **Team-Group Chat** - send a message to all the people at once within a selected team or group where you are a member. **Reduce inbound calls and checkups.**
- **Direct Chat** - send a direct message to an individual person within a team or group where you are a member. **Enable direct communication and actions.**
- **InterChat** - As an administrator or coordinator send a group message to another connected team or group where you are not a member. **Keep everyone informed.**
- **Broadcast** - As an administrator, you can send an instant message to everybody in all teams and groups connected to an individual supported person.

Video/Voice Call enables direct communication with a supported person, features include:

- **Instant calls** directly with a supported person or resident via a tablet or smartphone device.
- Enable **wellness checks**, maintain **social connections**, through shielding or cocooning.
- **Auto Answer** available for calls, where a person may be incapable of responding.

For any new organisations, carezapp can be deployed within a day on any modern web browser.
A companion app is available to download for iOS and Android devices.
