

**carezapp**

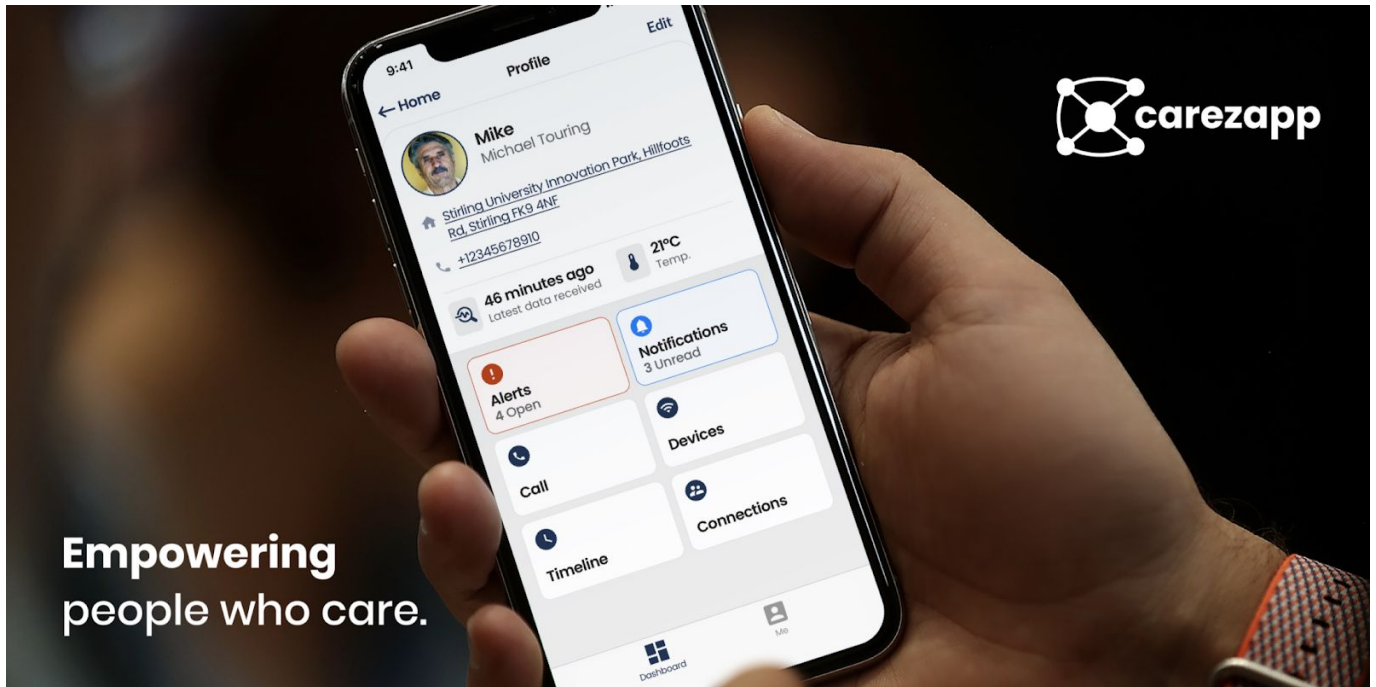

Together  
transforming  
care and support.

## Carezapp INFORM

A technology enabled support system for care in homes and in communities. Utilising the best-of-breed technologies, ambient sensors, connected devices and open APIs.

Aggregating data, which is then processed through our intelligence and rule engines.

Producing **meaningful alerts, notifications and insights** on a 24/7 year-round basis.

**Monitor real-time activity** within the home, motion, open and close events for doors, windows and fridges, occupancy of beds and chairs, incontinence and enuresis, resting breathing and heart rate, alert buttons and environmental information such as room temperature, smoke, CO and flood.

- **Deliver care and support services in-person and remotely on a 24/7 year-round basis, supported by real-time information and better insights,**
- **Deliver personalised care and support services for each supported person or resident, user-definable rules for alerts and notifications,**
- **Provide supplementary or backup supports to existing services that are at risk or under increased pressure and utilise self-isolating staff from home.**

For any new organisations, carezapp can be deployed within a day on any modern web browser.

A companion app is available to download for iOS and Android devices.
